

Liberlaunch Labs

Whitepaper

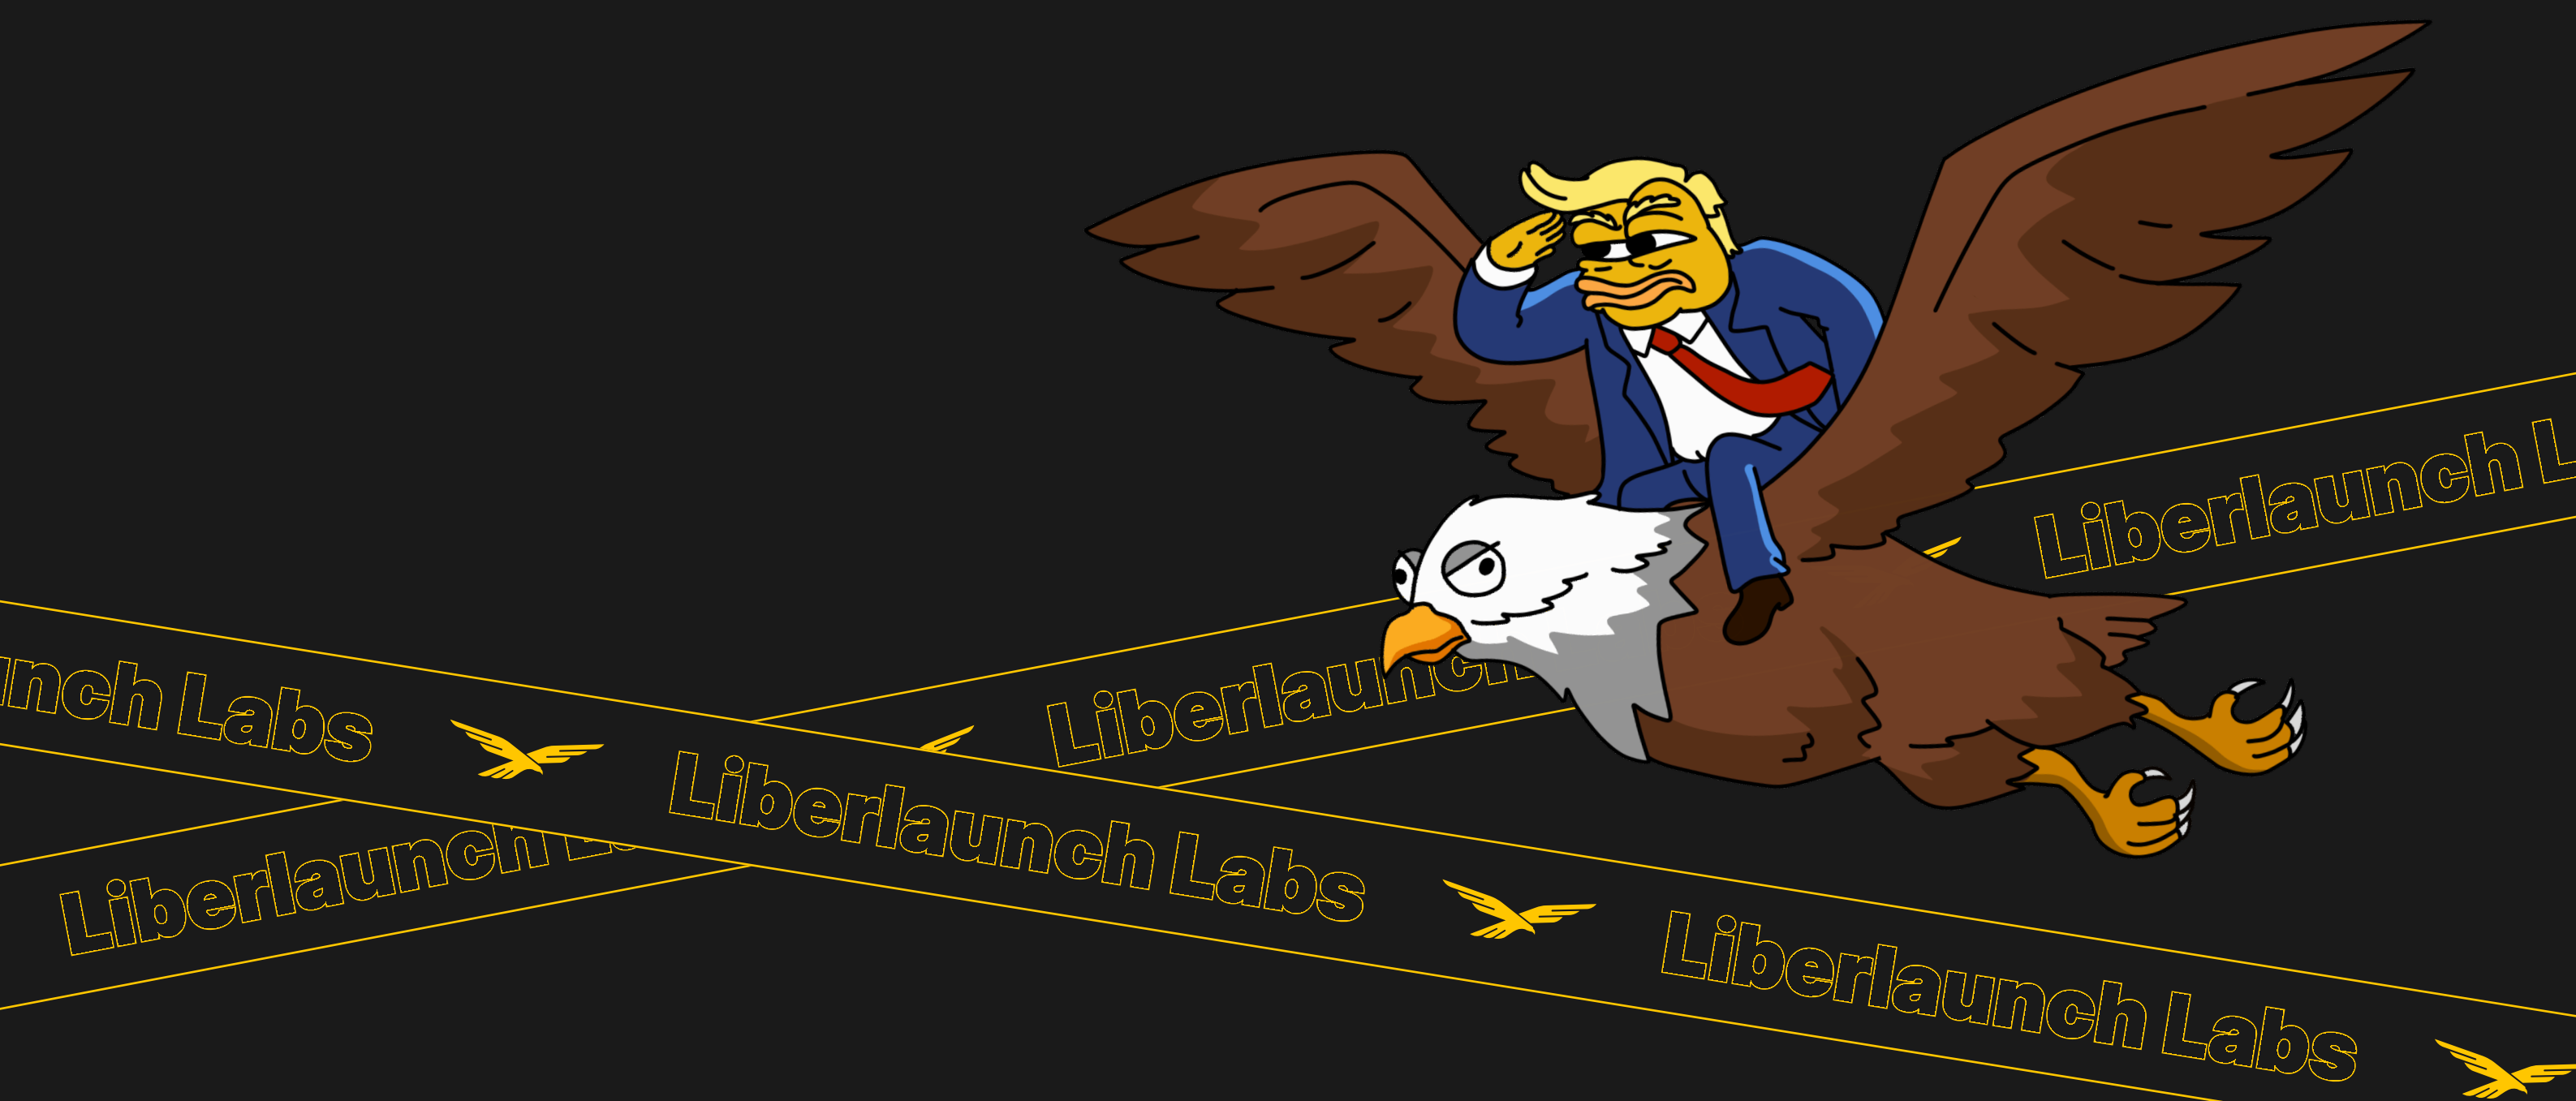

Opening Statement

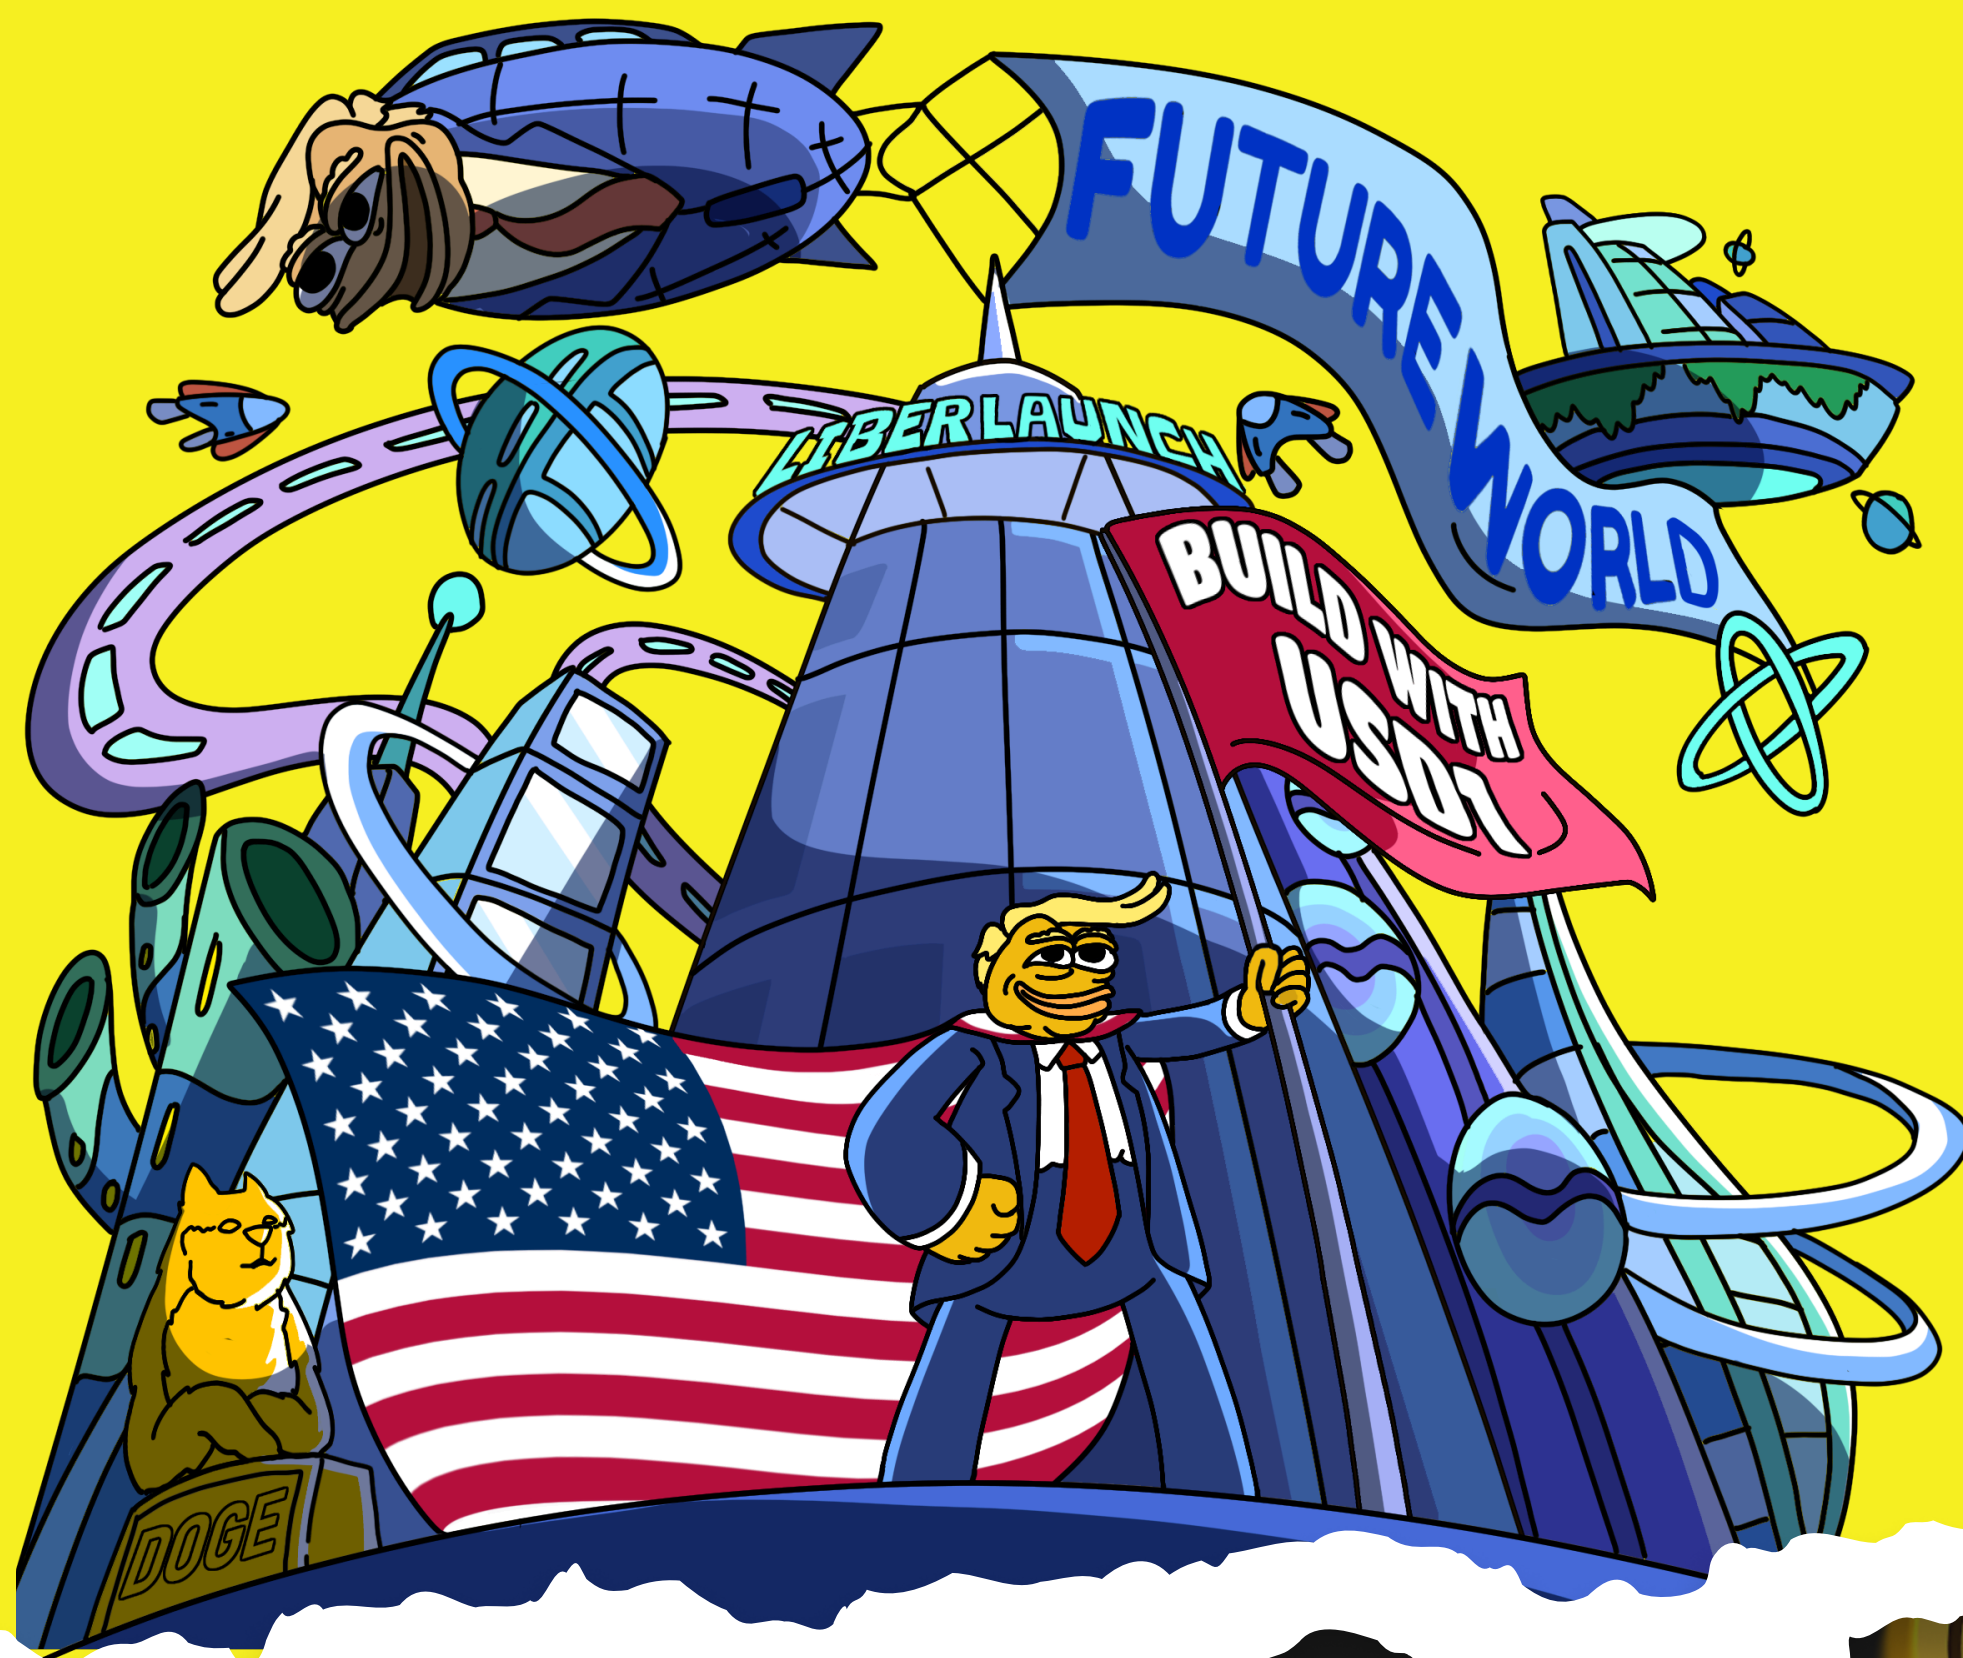

The Meme Movement Reinvented

In a world where meme coins have become symbols of both wild dreams and devastating rug pulls, Liberlaunch Labs rises to lead a revolution.

Backed by World Liberty Financial and inspired by the no-nonsense approach of Donald Trump, Liberlaunch Labs sets a new standard for meme coins: No rug anymore, just rockets.

Backed by World Liberty Financial and inspired by the no-nonsense approach of Donald Trump, Liberlaunch Labs sets a new standard for meme coins: No rug anymore, just rockets.

1. The Meme Coin Crisis: A Call for Change

Following a wave of rug pulls that shattered the meme coin space, investor confidence hit an all-time low. Scammers thrived while innovation died.

Seeing both the problem and the potential, **Donald Trump** established **The Liberty Fund**—a force to restore faith and functionality in the meme coin market. From this vision emerged **Liberlaunch Labs**, a platform built to:

- Rebuild trust in meme coins
- Protect retail investors
- Empower authentic creators

2. "No Rug Anymore"

Liberlaunch Labs is the **first meme coin launchpad** built entirely on WLF's decentralized finance (DeFi) infrastructure, designed to eliminate scams and empower community-led launches.

Why We're Different:

Meme-Only Focus:

We exclusively support meme coins with originality, creativity, and strong community support.

Presidential-Level Vetting

Each project is vetted as thoroughly as a national election to ensure legitimacy.

DAO Governance by the People

Every KYC-verified member participates in project approvals through a transparent DAO voting system.

USD1 Presale Model

We pioneer stablecoin-based presales using USD1, minimizing price manipulation and protecting early supporters.

3. **Haulens:** The Ultimate Anti-Rug Shield

Haulens is our secret weapon, empowering degens to hunt big opportunities without fear. With real-time scam detection and transparent analytics, we're making rug pulls a thing of the past.

Our proprietary Haulens technology provides institutional-grade tools to prevent rug pulls and ensure transparency:

Prism – Rug-Pull Radar:

- Real-time transaction monitoring to detect suspicious token movements or liquidity drains.
- Smart contract analysis to identify rug-pull patterns.
- AI sentiment analysis from platforms like X, Telegram, and others to predict FOMO or potential risks.

Mirror – Tokenomics Scoring Engine:

- Automated audits of token allocation, vesting schedules, and liquidity locks.

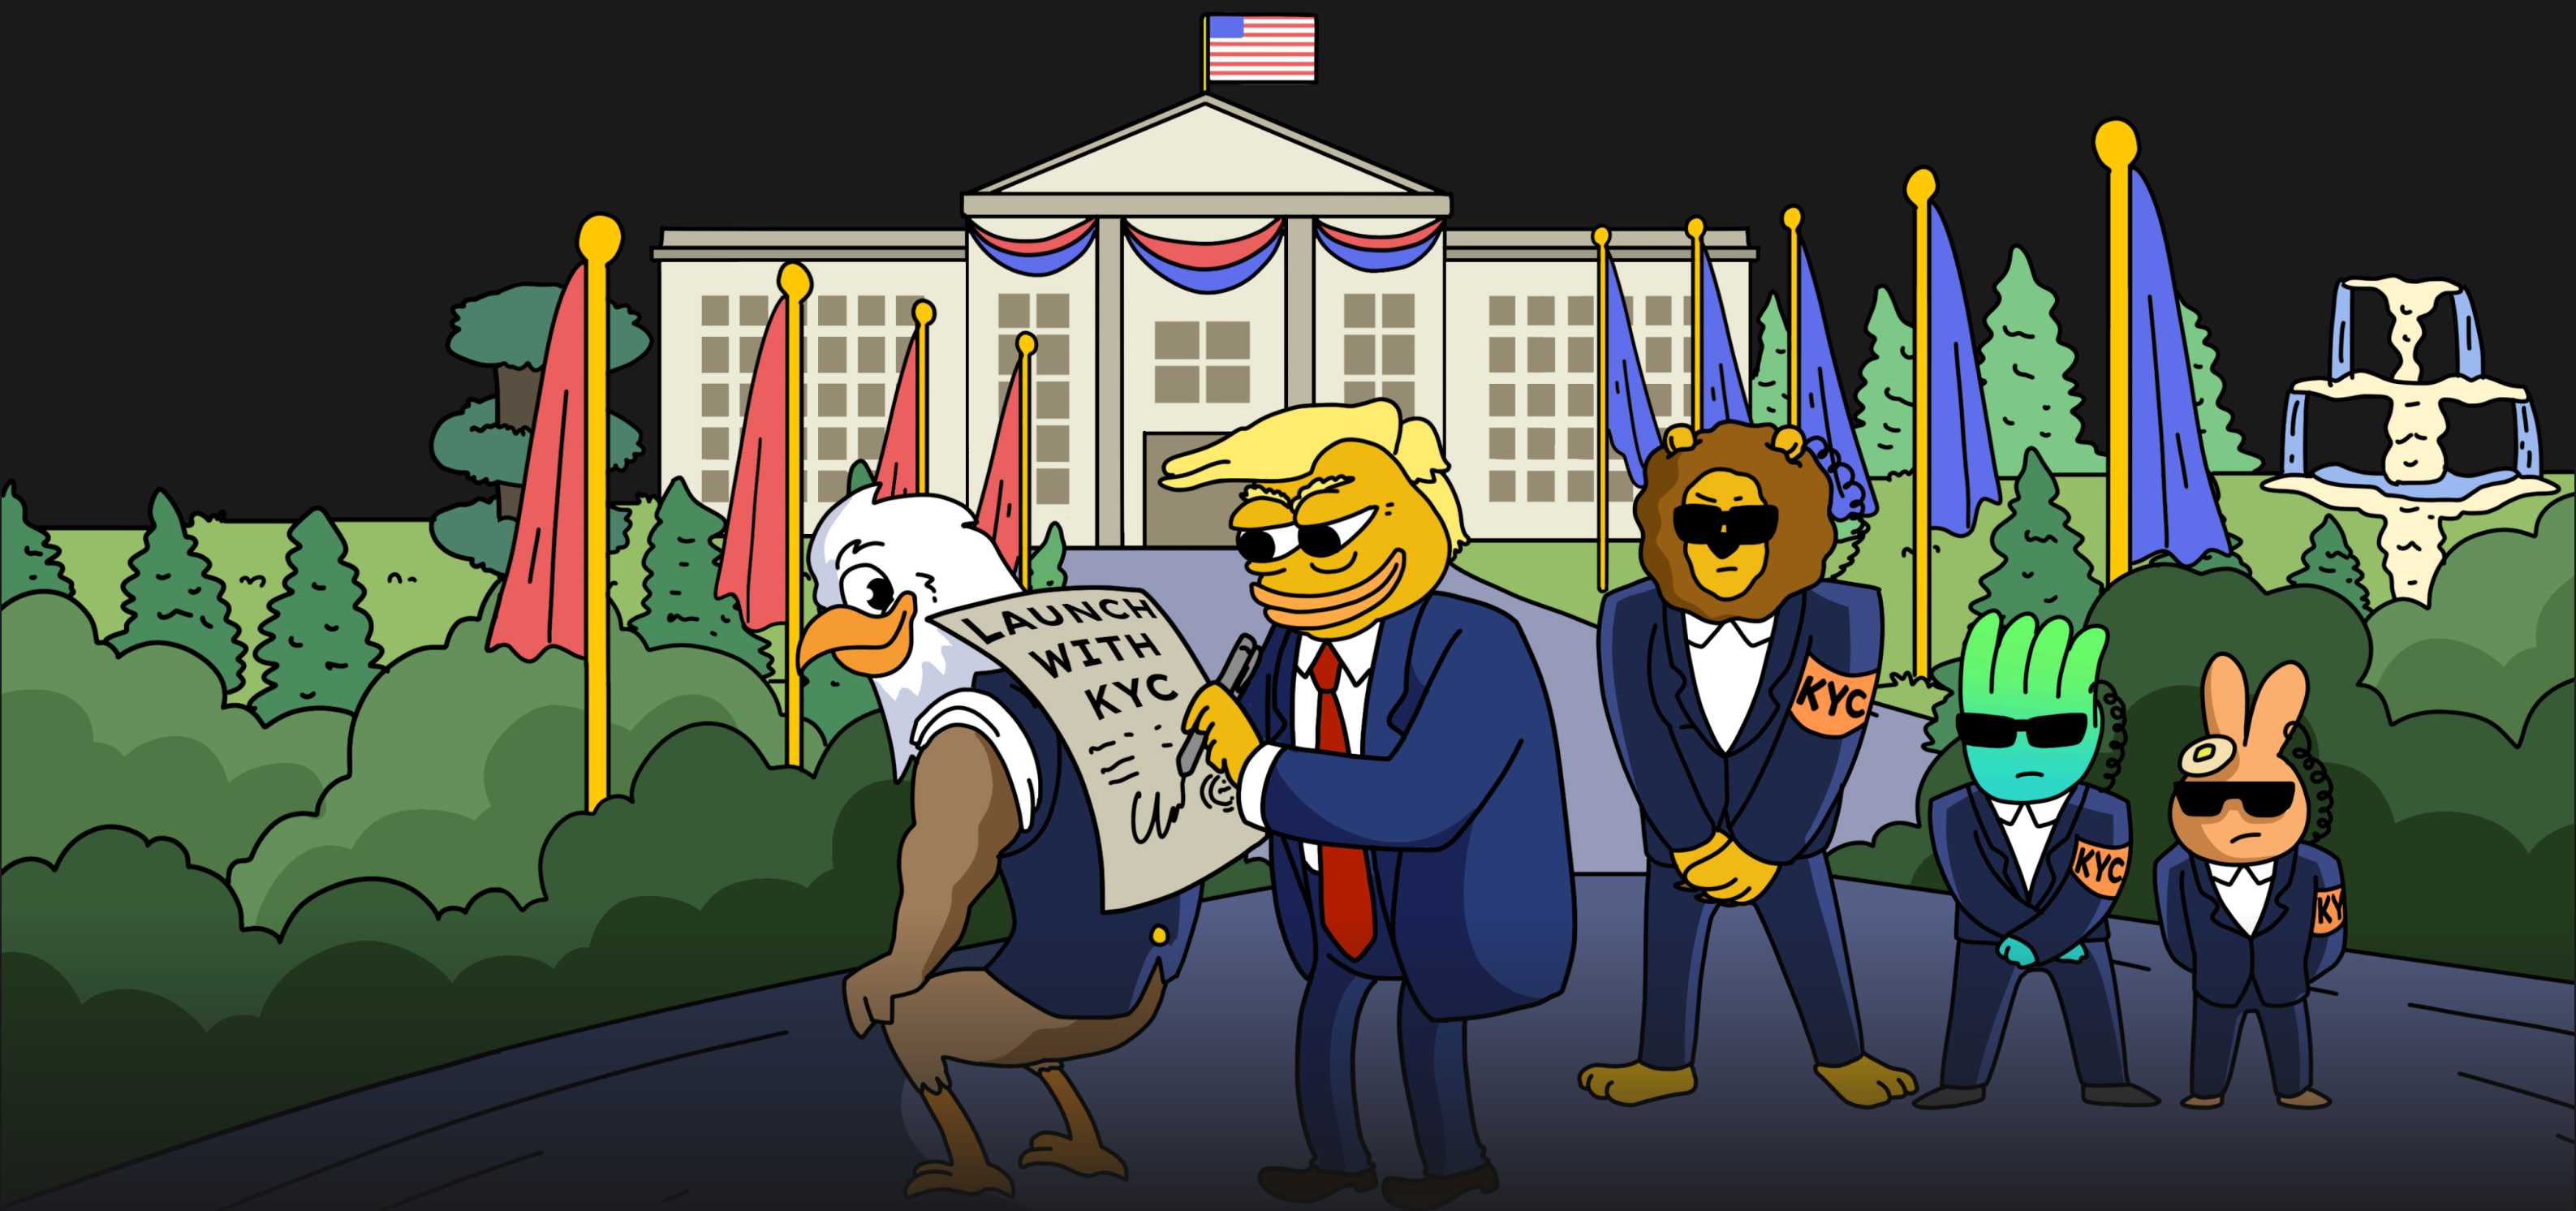

Lens – On-Chain Identity Verifier:

- Analyzes team wallet histories across various blockchains to verify experience.
- Assesses the Anonymity Risk Index to evaluate risks associated with anonymous teams.

4. Community Power

Trump has rallied a powerful community, verified and led by him, dedicated to combating meme coin scams. Our "degens" are more than just investors—they are a united force, transforming memes into valuable assets:

- **Scale:** Over **85,000 KYC-verified members** ensure trust and accountability.
- **DAO Governance:** The community collectively votes to decide which projects get launched.
- **Engagement:** Meme contests, AMAs (Ask Me Anything sessions), and gamification foster creativity and loyalty.
- **Anti-Scam Vigilance:** Members are trained to spot suspicious signs, ensuring no scams slip through our defenses.

5. Tokenomics

Name: **Liberlaunch**
Ticker: **\$LBLS**
Total Supply: **100,000,000,000 (100 Bilon)**

Allocation:

40 B (40%)

Product Development:
To support platform growth and development of Haulens technology

20 B (20%)

Staking:
Distributed over 3 years to incentivize long-term holding

15 B (15%)

Airdrop:
Fully unlocked at TGE, distributed to early community supporters

10 B (10%)

Exchange Liquidity:
Fully unlocked at TGE to ensure strong trading liquidity

5 B (5%)

Team:
Locked for 1 year, then linear vesting over 3 years

10 B (10%)

Marketing:
Locked for 1 year, then linear vesting over 3 years, used for growth campaigns and partnerships

6. Staking Program

The \$LBLS staking system is designed to reward long-term holders while enhancing the stability, decentralization, and engagement of the Liberlaunch Labs ecosystem. By locking their tokens into different pools, users earn attractive yields, strengthen governance participation, and unlock deeper utility within the platform.

20,000,000,000 \$LBLS (20% of total supply) is allocated for staking rewards and will be distributed over a period of 3 years, starting from the official staking launch in Q1 2026.

Staking Objectives

- Encourage long-term holding and reduce sell pressure
- Reward loyal users with attractive APY and bonus incentives
- Enable staked-based governance power in DAO voting
- Increase user retention through gamified and tiered lockups

Pool Structure & Reward Allocation

Users can choose from three lock-up pools, each offering different APYs and governance weight multipliers:

Lock-Up Duration	Staking Allocation	Distributed	APY	Governanc Weight
30 Days	20%	4,000,000,000	~12%	1x
90 Days	30%	6,000,000,000	~20%	1.25x
180 Days	50%	10,000,000,000	~30%	1.5x

APY is dynamically adjusted based on pool utilization, staking demand, and total locked supply. Actual returns may vary.

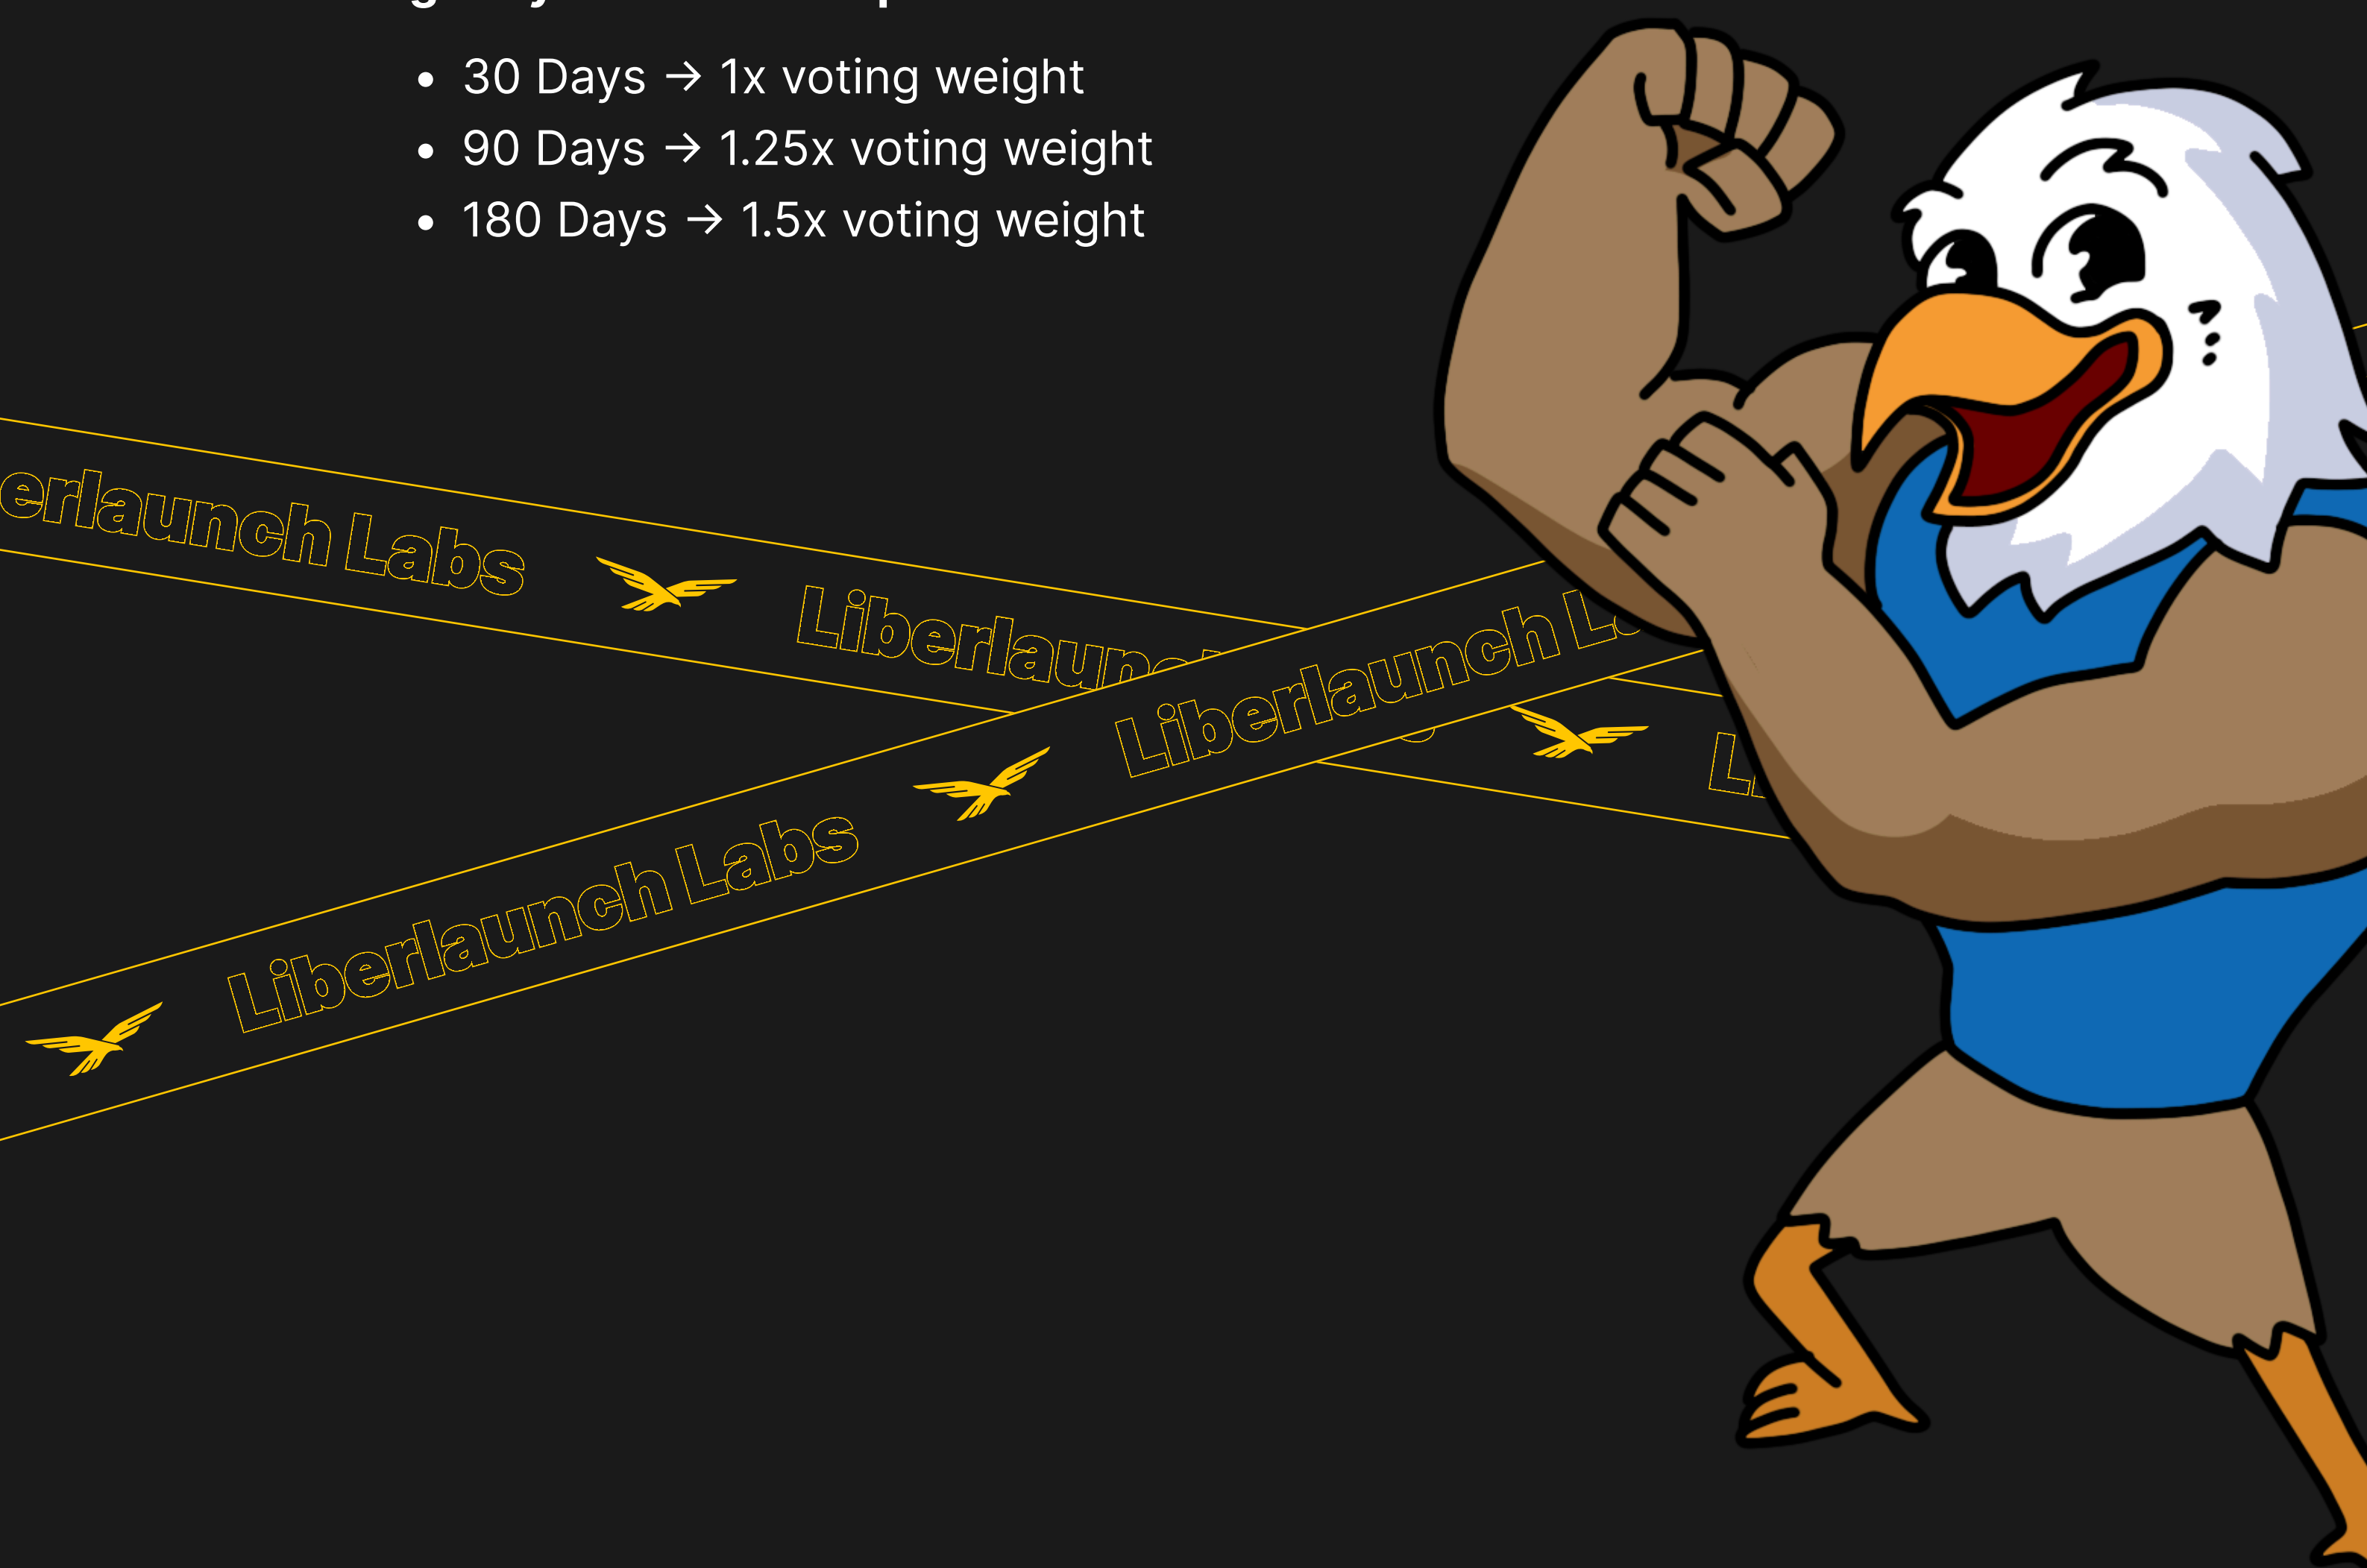

Reward Mechanism

- Daily reward generation via smart contract
- Users can claim rewards manually or enable auto-compounding
- Early unstaking results in reduced rewards or optional slashing depending on the pool
- Staked tokens are non-transferable until the end of the lock period

Governance Integration

Staking is not just about earning yield — it's also your gateway to **DAO governance**.

- All staked \$LBLS are counted toward voting power
- The **longer your lock-up**, the **higher your vote multiplier**
 - 30 Days → 1x voting weight
 - 90 Days → 1.25x voting weight
 - 180 Days → 1.5x voting weight

7. Roadmap

Liberlaunch Labs isn't just a launchpad — it's a long-term ecosystem play. Our roadmap lays out how we will evolve from a trusted meme token launch platform into **a multi-chain, anti-scam, community-powered DeFi hub for memes.**

Phase 1:

Foundation & Initial Launch (Q4 2025)

Objective: Establish core infrastructure, introduce \$LBLS, onboard the first wave of users, and begin building traction.

Milestone	Description
Official Website Launch	Public introduction, project overview, community links (Telegram/X)
Smart Contract Audit	Third-party audit to ensure secure token contracts
\$LBLS Presale	Token sale using USD1 stablecoin via our internal launchpad
\$WLFI & \$LBLS Airdrops	Token rewards for early adopters and ecosystem participants
Whitepaper Publication	Release of detailed project documentation and tokenomics
Haulens Alpha	First test version of anti-rug toolkit for internal testing

Phase 2:

Core Feature Development (Q1 2026)

Objective: Build trust infrastructure, decentralize launch decisions, and roll out anti-scam features.

Milestone	Description
DAO Voting Portal	Transparent, KYC-gated governance portal for community voting
Transparency Dashboard	On-chain metrics: fund flows, token distributions, LP lock status
Vesting Portal	Real-time monitoring of token vesting schedules for project backers
Liquidity Lock Tool	Required LP lock tool for all launching projects via audited smart contracts
KYC Gateway	Integrated KYC layer for both team verification and voter eligibility
Haulens Beta	Public beta of Prism, Mirror, and Lens modules for rug pull detection

Phase 3:

Ecosystem Expansion (Q3 2026)

Objective: Expand into a multi-chain environment and build tools that gamify community engagement and investor loyalty.

Milestone	Description
Multi-Chain Presales	Support for new chains: BNB, Arbitrum, Polygon, etc.
Staking & Stake-to-Earn	Rewards for \$LBLS holders who participate in staking and governance
Gamification Layer	Daily check-ins, missions, user rankings, and badge system
Meme Creation Quests	Weekly meme challenges with token rewards and leaderboard recognition
Cross-Chain Bridge	Allow seamless LBLS movement between supported chains
Investor Tier System	User rankings based on holding levels, activity, and DAO participation

Phase 4:

Dominate & Innovate (Q4 2026)

Objective: Make Liberlaunch a global standard for meme coin legitimacy — integrating AI, reputation scores, and meme-native financial tooling.

Milestone	Description
AI Meme Scoring Engine	Evaluate memes based on virality, quality, and cultural impact using AI
Creator Reputation Index	Rate past project teams based on on-chain performance & launch history
Meme Trading Board	Marketplace for trading meme NFTs, stickers, and digital collectibles
Mobile App	Full app for portfolio tracking, DAO voting, and community quests
Meme Coin Index	Real-time dashboard of trending meme coins, LP status, and token health
WLFi Lending Integration	Use \$LBLS in WLF's DeFi lending ecosystem to borrow or earn interest

Final Words: Launching Legendary Memes

Liberlaunch Labs is here to reclaim the soul of meme coins. No more scams. No more volatility games. Just community, creativity, and crypto done right.

Led by bold leadership and Trump's unapologetic vision, we're not just another launchpad—we're a cultural revolution powered by memes.
